ADC2020 Emulator Cable compatible with Ford* & Toyota* Code D756922AD

NEW - now programs Toyota models with HiTag-AES transponders when no working key is available

Enables programming of replacement keys for both Ford and Toyota models. With Ford the cable is required to shut down an active alarm. The emulator works together with the Smart Pro and Advanced Diagnostics software to create a master key in situations where all keys are lost for a range of Ford models with an active alarm and for Toyota models with HiTag-AES transponders.

L'emulatore consente di creare una chiave master necessaria alla programmazione anche in caso di smarrimento totale di chiavi disattivando l'allarme del veicolo quando attivo per un'ampia gamma di modelli Ford. Il cavo consente anche la programmazione di chiave Toyota dotate con il transponder tipo HiTag-AES in assenza di una chiave funzionante.

Ermöglicht eine Programmierung von Ford und Toyota Ersatzschlüsseln, auch wenn kein funktionierender Schlüssel verfügbar ist. Im Fall von Ford wird das Kabel auch benötigt, um einen aktiven Alarm zu deaktivieren. Der Emulator arbeitet um einen Hauptschlüssel zu erstellen von Ford-Modellen mit aktivem Alarm und für Toyota-Modelle mit HiTag-AES-Transpondern verloren gegangen sind.

Permet une programmation des clés de proximité Ford et Toyota de remplacement même qu'aucune clé fonctionnelle n'est disponible. L'émulateur crée une clé maître pour une gamme de modèles Ford avec une alarme active, et pour les modèles Toyota avec des transpondeurs HiTag-AES.

Permite a programação de chaves de substituição para os modelos Ford e Toyota quando não existe nenhuma chave funcional disponível. Com a Ford, o cabo é necessário para desligar um alarme ativo. O emulador funciona para criar uma chave mestra para uma variedade de modelos Ford com alarme ativo e para modelos Toyota com transponders HiTag-AES.

Permite programar llaves para los modelos Ford y Toyota en caso de pérdida total de llaves. En el caso de Ford, el cable es necesario para apagar una alarma activa. El cable emulador funciona para crear una llave master para los modelos de Ford con alarma activa y para modelos Toyota con transpondedores HiTag-AES.
